Abstract of **GB2321283**

A sealing assembly suitable for use with a tracker ball in which the ball 3 is mounted to project from an aperture in a housing 4 comprises a sealing ring 1 which engages the surface of the ball 3 and an O-ring seal 2 which seals the gap between the sealing ring 1 and the housing. The sealing ring 1 can move in the direction indicated by arrows 5 to accommodate variations in diameter of the ball or movement caused by external forces. The ring 1 is made from or coated with self-lubricating plastics material, e.g. PTFE.
